

Workspace Tech Tip

CPS cannot be open when using Workspace 8.01 Annotation Tools

Description: When a user tries to use any of the Workspace 8.01 Annotation Tools while the **CPS Content Deliver** screen is open, a dialog box will open stating that all CPS windows must be closed before proceeding. This dialog box will prevent the user from using the Workspace Annotation Tools.

Workaround: The following workaround resolves the CPS and Workspace conflict by assigning Workspace functions to a device SoftKey on an Interwrite Mobi or an Interwrite DualBoard. Follow the steps outlined below to deliver a CPS question while using Workspace annotation tools:

- 1 Start CPS and Workspace.
- 2 In Device Manager, assign the **Annotate Over Desktop** tool to a SoftKey on the Interwrite device you are using to run Workspace.

- a Click on the **eInstruction Tools** icon in the System Tray (Windows) or on the Mac Menubar and select the *eInstruction Device Manager* option to open **Device Manager**.
- b Select a device (*e.g.*, Mobi).
- c Select *Properties* from the **Options** menu.
- d Select the **SoftKeys** tab.
- e Select a **Button**.
- f Click on the Workspace Tools drop-down arrow and select **Annotate Over Desktop**.
- g Click the **OK** button.

- 3 To use the Workspace annotation tools, select the SoftKey assigned to Annotate over Desktop. A dialog will still appear with the following message: *CPS windows must be closed*. Close the dialog by clicking **OK** and you will be able to use the Workspace Annotation Tools.

Please Note: eInstruction realizes the criticality of this functionality and, as a result, will be releasing a fix in the next release of Workspace due out this summer.
